

EBC BRAKES[®] RACING

Thanks for Choosing EBC Brakes!

EBC's 2pc fully-floating brake discs are fitted with anti-rattle springs at every bobbin location, however, during hard cornering or on full steering lock there may be an audible 'clicking' noise heard coming from the brake discs.

This 'clicking' sound is normal and is perfectly safe.
It is not a defect with the product.

After your new discs have bedded in, this clicking sound will get quieter.
