These pads bed in fast and deliver extremely high friction linear performance in track use. GPFAX pads are high friction but highly stable in stop. This means pads are powerful and predictable time after time when the brake is applied in race use. The "in-stop" friction fall off is almost zero and can hardly be noticed at the lever meaning the brakes offer superb control. The EBC dyno is set to duplicate race conditions at the Road America race track and represents a true simulation of race brake demand. The number of race teams using GPFAX grows annually and for 2021 the exact same formulation developed through 2019 is used again.

EBC pads are developed in our own laboratory and tested using this race track simulator dynamometer to guarantee perfection before being thoroughly field tested on dozens of race teams.

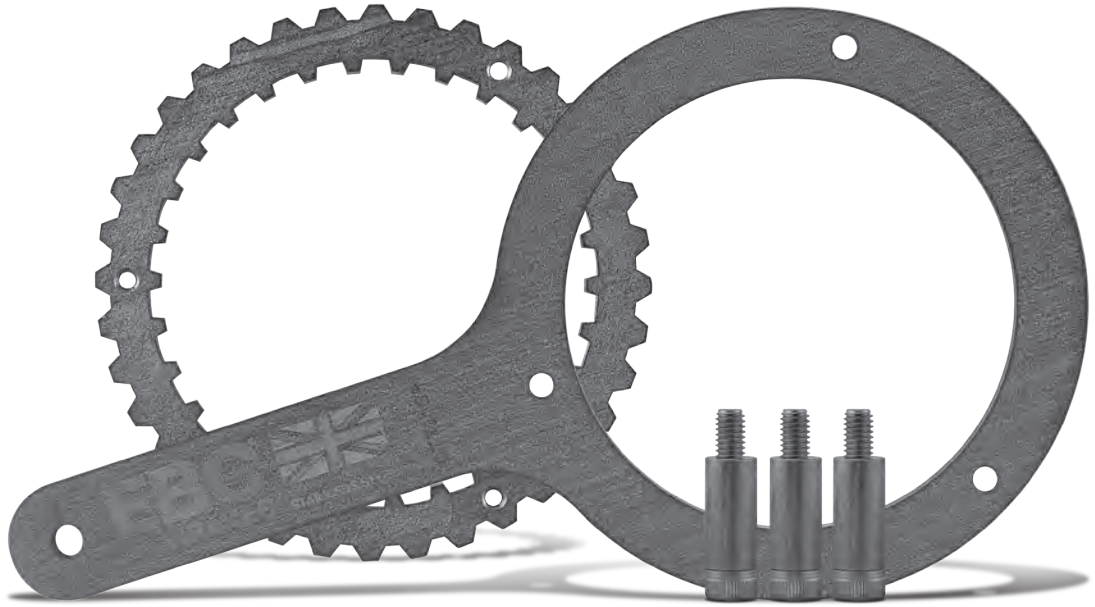
CT CLUTCH REMOVAL TOOLS

Made in the UK, these laser cut clutch removal tools make clutch removal, loosening of the drive shaft bolts and re-tightening a breeze, without any fear of damage to your expensive clutch basket.

Tools can be extended to create more leverage if required with any simple workshop tool or tube. EBC Brakes produce a clutch tool for almost every clutch plate design known.



CAUTION:

Replacing a clutch kit requires skill, expertise and a good workshop, plus tools. A small press and a spring compressor may be needed. If you are not familiar with these routines, use a competent dealer or visit www.fixmyhog.com as an example of how to guide you safely.

Making Precision Pilot Jets

Everyone knows how sensitive an engine is to pilot jets in the acceleration stages from 1000 to 3500 rpm and getting fuel mixture right in this area is critical. For this reason jets have to be perfectly accurate in their marked size and incremental size steps. EBC Brakes sister company A-BAX Precision Engineering Ltd in the UK has purchased the most accurate machine on the planet for this work shown below. A-BAX Precision Engineering Ltd pilot jets are precise, clearly marked and reliably gauged using pin gauges, accurate to one tenth of a thousandth of an inch, you can rely on their accuracy.

Please NOTE … Mikuni style hex jets are flow rate gauged so the hole size (bore) does not correlate with the jet number where all other main jets do – all jet hole sizes are in mm

Red numbers are new to range

These jets are aftermarket made in the ABAX EBC family facility in the UK from brass, made to exacting specifications and are NOT genuine Mikuni, Keihin or Harley® products

S&B FILTERS

FILTERS
www.sbfilters.com

Made in the USA, S&B Custom Filters are a great choice for all types of carburettor and feature a special man made gauze called "Remay" made by Dupont® which has the benefit of perfectly uniform hole patterns. This enables the S&B filter to catch dust better than an oil soaked filter and to be run DRY. Oiled filters require regular washing and relube which plays havoc with carburettor balance. Available in parallel or cone type design, with high lustre chrome end caps.

BAFFLE-PAC-Silencer Glass. PART NO. BP001

This material is labelled and conforms to BSAU 193T2. BEWARE of distributors selling cheaper roofing felt in its place. Repackable Tailpipes as the name implies, require regular cleaning and repacking with BSAU approved “SILENCER GLASS” such as Winning BAFFLE PAC. Failure to maintain tailpipes in such a way will lead to clogging of the silencer wool and raised noise output, together with reduced engine performance. Freeman Automotive and Dealers are not responsible for noise offences due to lack of maintenance as described above. “Recommended repacking period is every 3000 miles on two-strokes or when bike becomes noisy if sooner”.

BRAKE FLUID

Bottle label shows all specifications of the fluid.

DOT 4

A refined specification polyglycol fluid as fitted to most faster street bikes now produced.

DOT 4 LV

Advanced low viscosity fluid, to optimise the performance of ESP/ASR (Electronic Stability Program) systems.

DOT 5

Silicone fluid as used in Harley Davidson Motorcycles and many special High Performance Brake systems.

BF307

Highly refined DOT 4 Brake fluid, ideal for Racing or High Performance Road bikes. Can be used in all systems specifying DOT 4 but **NOT** with (DOT 5) silicone fluids.

CAUTION: Please check carefully the type of brake fluid used in your system.
Adding incorrect fluids could cause major brake failure.
DO NOT ever mix glycol fluids (DOT 4 or BF-307) with DOT 5 silicone.

BRAKE CALIPER LUBE

These sachets of dedicated, high viscosity greases are perfect for all of your customers’ brake service needs. Always use sparingly on caliper slider pins and rails, but do NOT get near the pad surface and do NOT use as anti-squeal as it will not help at all. Each sachet contains 5 grammes of grease.
